

An example of setting up a business process in SuiteCRM

The example folder contains an example of setting up the "Order Processing" business process for the AOS_Quotes module.

- bpmn - an example of a business process scheme for Camunda: bpmn scheme and necessary java classes (Russian and English versions);
- camunda-example - a package for adding settings in the AOS_Quotes module (without adding an approval panel to detailviewdefs);
- camunda-example-ui - a package for adding an agreement panel to the view form - detailviewdefs.

Installing an example of setting up a business process in SuiteCRM

1. Install SuiteCRM integration package with Camunda;
2. write in the SuiteCRM configuration file access to the Camunda service;
3. install the camunda-example package;
4. Add an approval panel to the detailviewdefs of the AOS_Quotes module using one of the following methods:
 - if your installation of SuiteCRM does not require completion of detailviewdefs of the AOS_Quotes module, then install the camunda-example-ui package. The package will create or **overwrite** the file custom/modules/AOS_Quotes/metadata/detailviewdefs.php;
 - if your installation already had the modification of detailviewdefs of the AOS_Quotes module, then manually add the approval panel to the custom/modules/AOS_Quotes/metadata/detailviewdefs.php file (or modules/AOS_Quotes/metadata/detailviewdefs.php);
5. perform the "Recovery" procedure;
6. compile the business process diagram code into Camunda (located in the bpmn folder):

```
mvn install
```

Requires java version 1.8;

7. Upload the generated war file to the Camunda server.
